

Give your employees fast and easy access to their archived email.

Enable employees to quickly and easily find messages on their own.

The average employee spends about 28% of their week managing email with 95% of email sitting in the inbox never being looked at again.*

Help employees save time and increase productivity, even while on the go. With secure access to their personal archive through the Smarsh Connected Archive Professional Cloud, your employees can:

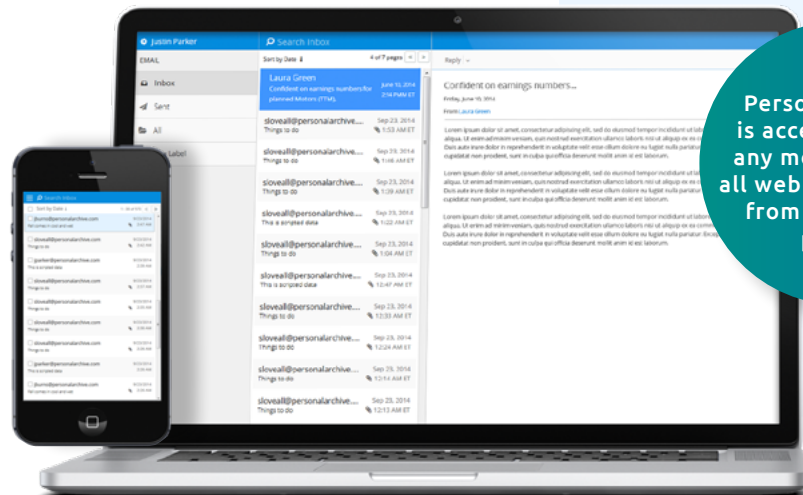

- **Find hard to locate or deleted emails.** Give employees the power to retrieve emails themselves—even things they may have deleted—from their desktops, laptops or mobile devices.
- **Stop stressing about their inbox being “over the limit”.** There’s no need to file and save everything—emails are automatically archived with Smarsh.
- **Simplify mailbox management.**

With the powerful Smarsh search functionality employees can find specific messages and attachments quickly and easily. Once found, easily download and restore message(s) to Outlook or reply, forward and print directly from the archive.
