

Get the email archiving solution that's built for the unique needs of your business

Why capture email?

Organizations in regulated and litigious industries rely on all types of communication to connect with their clients, but email remains at the heart of business communications and has long been subject to regulatory archiving requirements. Allow your organization to continue to run effectively without risking non-compliance.

Key features

Direct source capture

Identity integrations

Attachments support

Message directionality

IP restrictions & encryption

Personal archive compatible

Stay compliant by archiving all of your email communications, including attachments

How it works

Email archiving can be enabled for individuals or across your entire organization, with set security requirements through forced TLS encryption or IP restrictions. Once implemented:

- Message data is captured automatically through journaling in near real time and sent encrypted in-flight to the archive.
- Upon ingestion, all data is indexed and made available for fast, on-demand search alongside all other archived channels.
- Messages are threaded together, in order, to show the full context of the conversation.
- Images and files are supported and can be viewed or downloaded in their original form.
- Capture is fully compliant, preserving chain of custody and identifying users across channels.
- Messages can be retained for as long as necessary, and exported in multiple formats at any time.

For the latest list of supported email channels or to get started, contact [1-866-762-7741](tel:1-866-762-7741).

Supported channels include:
