

# Identify and deal with risks before they impact your business.

## The Challenge

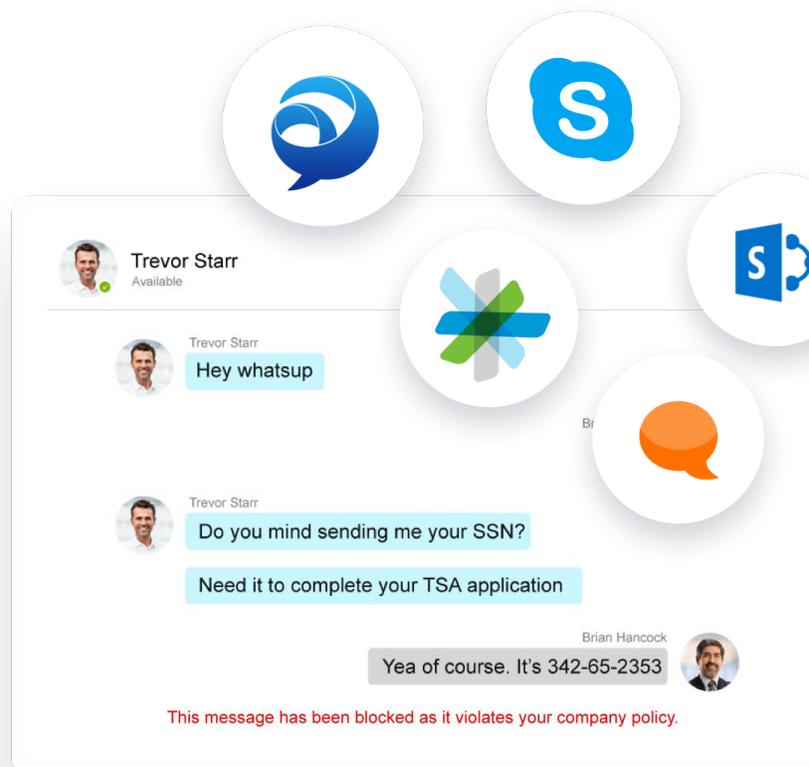

Proactive control of electronic communications requires proactive policy enforcement. There is a growing need for capabilities including feature controls, ethical walls, and real-time alerts to identify potential risks before they hit the archive and cause damage or leak sensitive information.

## The Solution

Adding the Control App to Connected Capture allows clients to enforce pre-emptive policies across compatible communication channels including Cisco Jabber, IBM Sametime, Facebook, LinkedIn and many more. It is the only real-time capture and control solution in the market to identify and act upon potential policy violations prior to ingestion into the archive.

## Key Benefits

- ✓ Expands the compliance capabilities of the most popular communication channels
- ✓ Enables compliance pre-review of employee communications
- ✓ Proactively detects, locates and protects sensitive information through policies
- ✓ Enables blocking of high-risk content and enforcement of acceptable use policies
- ✓ Provides usage and trend reports at user, group and global levels
- ✓ Ensures only the features that comply with internal policies or regulatory guidelines can be accessed for specific channels

## Key use cases

### Managing communications between employees

Activate and manage ethical walls to restrict segments of employee communication based on groups of individuals, departments or functions.

### Real-time monitoring and alerting

Stay ahead of potential compliance violations by spotting violations before messages are sent and/or delivered.

### Pre-reviewing employee communications

Conduct compliance pre-review to alleviate the burden on supervisory teams reviewing content once archived.

### Enabling feature controls

Only allow use of communication tool features (including Facebook likes) that your compliance policies have approved.

### Managing Data Loss Prevention

Prevent confidential information from getting into the wrong hands and ensure high value content is protected.

## Control integrates seamlessly with Connected Capture

### Connected Capture

Capture solutions across 80+ communication channels.

Connected Capture supports 80+ communication channels, enabling employees to communicate effectively while staying compliant. Communications can be stored in the seamlessly integrated Connected Archive or sent to an existing archive. All communications are captured continuously, in their native form, direct from the source channel, with full conversational context preserved.
