

Your eyes into what's changed and when.

The Challenge

Whether to prepare and protect your organization for litigation and e-discovery, to comply with regulatory obligations, or simply to keep an immutable historical record of changes to your website, Financial Services organizations need to keep accurate records of what was published online and when.

The Solution

Web Archive enables you to archive all your web content automatically and securely. You can capture complete websites or individual Web pages in their original format, providing the precise record of what was published online at any specific point in time. Web pages are archived and rendered in your browser with their original look and feel, interactive elements remain functional and links between pages are preserved, all helping you to bring dormant web experiences back to life.

Key Benefits

- ✓ Dynamic website reconstruction
- ✓ Automatic capture and time stamps
- ✓ Designed for supervision and e-discovery
- ✓ Multiple view and export formats; PDF, screenshot (jpg) or text
- ✓ Fast, powerful search. Full-text, historical search and browsing
- ✓ Advanced page comparison features
- ✓ Customizable capture frequency
- ✓ Simple Onboarding and user experience

Key use cases

Meeting compliance obligations

Satisfy the requirements of FINRA, SEC, FTC or other regulatory bodies by preserving your full range of web content complete with original context. Web Archive supports everything from Squarespace-designed to custom websites and other media platforms including Trulia, Vimeo, YouTube and more to ensure there are no gaps in compliance.

Addressing legal & e-discovery requirements

Enable your legal teams to spend more time focused on case preparation and less about data collection. Web archives can be securely downloaded to a PC, encrypted and saved to a portable media device, or imported into a third-party legal review platform.

Supervising web content

Mark archived pages as reviewed, flag pages for violation or for further review, and add notes to document steps of the supervision process. Provide proof of supervision with a full audit trail of every action taken within the archive. Automatically summarize changes on any page being archived, including third-party sites.

Capturing specific content including funds, house prices and personal reviews

Maintain a snapshot of the funds displayed on your website for any given day, preserve a record of house prices over time or mortgage lender reviews with powerful search and easy review functionality.

Carrying out internal investigations and protecting against false claims

From HR matters to potentially fraudulent claims, having an accurate record of web content is a key component of getting to the truth. Preserve dynamic views into web content as it originally appeared and find and compare web content easily and effectively across different points in time.

Snapshots of archived content enable fast and simple navigation within your archive, while the ability to render each page and its contents in its original format creates an immersive review experience.
