Connected Archive™

Personal Archive for Enterprise Archive
Get access to all your electronic communications data in one place

The Challenge

In today's work environment, employees communicate and collaborate using a wide variety of tools. Applications like Slack, Microsoft Teams and mobile text messaging have become necessary for conducting business. However, with all these communication tools, it's difficult to remember whether someone sent an important attachment by email or another channel. Most companies offer employees access to only their archived email, rather than their full range of communications, which reduces productivity. Your employees need a straightforward solution that allows them to store and search all their communications in one place.

The Solution

With Personal Archive for the Enterprise Archive, employees have fast and easy access to all their communications data in one place. Regardless of which communication channel was used, they don't have to worry about hitting their storage limits or about recovering deleted communications.

Increase productivity by empowering your employees to search for and easily access their historical data across multiple locations.

Key Use Cases

✓ Search across all electronic communications data

✓ Download communications directly from the archive

Key Benefits

✓ Improve employee productivity with fast and powerful search capabilities

✓ Unify end-user personas across multiple channels to a single corporate identity

✓ Relieve the IT burden of retrieving and restoring historical communications
