

## Archive web content for full visibility into what's changed and when

### Why capture web content?

Website archiving is a growing necessity for a wide range of organizations, whether to prepare for and protect against a litigation event, comply with regulatory obligations or simply keep an immutable, historical record of changes to a company website. Allow your organization to take full advantage of the power of the web while keeping track of changes and staying compliant with web archiving from Smarsh.

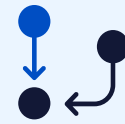

### Key features

Comprehensive, automatic capture

Flexibility

Multiple export & download options

Data security & time-stamping

Advanced search & page comparison

Dynamic website reconstruction

## Expand your compliance perimeter to include your organization's web-based communications

### How it works

Smarsh offers the most comprehensive web archiving solution available in the marketplace, capturing complete websites or individual web pages in their original format and providing a precise record of what was published online and what changed at any point in time. Once implemented:

- Web pages are captured and rendered in your browser with their original look and feel.
- Interactive elements remain functional and links between pages are preserved.
- Each archived page is time-stamped and stored, unaltered, in its original format.
- Web content can be retained for as long as necessary and exported in a multiple formats at any time.
